

Don't forget about your dental checkups!

Your dental checkup is not only good for your health, it's also good for your wallet. Preventive services, like checkups, are 100 percent covered by most dental plans. Yet, many people leave money on the table by not going to their dentist often. Here are three great reasons to keep regular checkups.

You get the most from your benefits

Among adults who've purchased an individual dental plan or have coverage through their employer, more than 36 percent won't have a single claim over the course of a year, including almost 45 percent of those ages 19-34¹. Those unused benefits don't roll over from year to year.

When you schedule regular checkups, you take advantage of this valuable benefit

You can get easier and less expensive treatment².

Your checkup can be a smart financial move in another way too. Catching dental issues early usually allows for easier treatment. Skipping your exams or letting a problem linger can result in more complex and expensive procedures.

You decrease your risk of disease³

Your dental checkup will usually consist of a cleaning and a thorough oral exam. The cleaning will help prevent cavities and gum disease by removing tartar and plaque buildup.

During the exam, your dentist will check for signs of oral cancer, tooth decay, gum disease, tooth grinding, alignment problems and any other issues. In addition, your dentist can detect signs of more than 120 diseases, including diabetes and heart diseases⁴⁵. If you have already developed an issue, your dentists will discuss treatment options with you.

Even if your teeth feel just fine, underlying issues can sneak up on you. When you keep your dental checkups, you can help keep your smile healthy too. Check your calendar and schedule your next exam today.
